

THE FOUNDATION OF EXCELLENCE

A research first approach of perfecting turfgrass performance.

Picture shows turf plots sprayed with Roundup at research facility, and GT24 was the only survivor.

Variety information

Description:

GT24 is a dark green perennial ryegrass that was selected for glyphosate tolerance. It has great stem rust resistance with moderate resistance to crown rust. GT24 has shown good turf quality across multiple trials throughout the US.

Applications:

GT24 can be very useful in the overseeding market and permanent turf where there are problems with poa annua. A rate of 8oz/acre of glyphosate may be applied under 90 days after planting to reduce or eliminate poa annua. Special conditions may apply such as do not spray within one week of freezing temperatures. Also adequate irrigation should be applied.

Geographical Adaption:

GT24 is adapted for permanent turf and overseeding of dormant Bermuda around the world. Fertilizer rates typical for a ryegrass after a glyphosate application is helpful to aid in the resistance allowing GT24 to grow out of the glyphosate effects while the poa dies.

PRODUCT FEATURES

Dark Green Color	● ● ● ● ●
Glyphosate Tolerance	● ● ● ● ●
Stem Rust	● ● ● ● ●
Low Growth Habit	● ● ● ● ●
Stem Rust	● ● ● ● ●
Seeding Rate	7-10 lbs /1000sq. ft (294-490 kg./ha)
